

A cable-stayed bridge is shown from a low angle, looking up at the tall, dark pylon. Numerous stay cables fan out from the pylon to the bridge deck. The sky is a deep blue with some light clouds, and the sun is setting, creating a warm glow on the horizon. Light trails from cars on the bridge deck are visible in the foreground, moving from right to left. The overall mood is serene and modern.

## ECXGATE 2.0

*ECXgate is a software for message exchange, transaction visibility and conversion. A sophisticated, extremely flexible and easy to use solution that simplifies and enhances the opportunities to exploit existing IT infrastructure more efficiently. ECXgate is the result of 15 years experience of integration and exchange of messages in the energy market.*

*The system is excellent.  
It is easy to understand,  
stable, fast and reliable.*

SKL Marked AS

### WHAT'S NEW IN ECXGATE 2.0

New improved GUI  
Pono module  
Address Updater module  
24/7-service

#### Increasing message volumes

The philosophy behind our software is rooted in the users needs connected to the increasing message volumes between actors, and even now, between applications. ECXgate is therefore built as an EAI software (Enterprise Application Integration) that adapts the users and the company's needs.

#### Regardless of format or protocol

ECXgate is independent of format or protocol. Many standards and protocols are already integrated, but the software can also be customized according to the customer's specific needs and wishes.

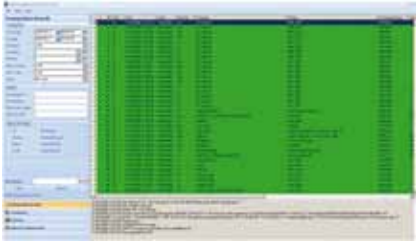

#### Easy to configure and easy to use

Our software is built on latest generation technology with multi-layer architecture, .Net Framework through Microsoft as a partner. ECXgate is easy to configure and easy to use.

Pono  
Address Updater

flexible and easy to use

# WHY CHOOSE ECXGATE?

## Integration

- You have multiple systems that must be synchronized
- You have a subsidiary that need to share data
- You have data exchange with multiple trading partners
- You need to convert data from one system to another
- You have a need for security around data exchange
- You will save time and have control over information flow

## Flexibility

- You need a system that can handle most formats used in an electronic world with electronic documents and data
- You have a need for scalability and modular functionality
- You require traceability and easy access to data
- You need to route messages to multiple recipients

## Usability

- You want the functional simplicity that has been a goal since the beginning of the development project
- You want to take advantage of a system that has been made by an end user's perspective

## A solution for the future

- We note customer's needs and would like to hear your opinions on system improvements
- Our products are found in many different industries and user groups
- We use a modular design that allows easy scalability and expandability
- Our modular environment allows implementation of new technology
- We perform ongoing stress testing and stress tests to guarantee a stable product
- We use the latest generation technology which provides good performance
